Even though Heart Health month is over, there are still several opportunities to [attend a free event and hear about the latest in cardiac treatments and prevention](#). Not able to attend an event? Read about the many exciting recent discoveries in cardiovascular disease prevention, research, and treatment coming out of Stanford Medicine in our cardiology news wrap-up. [Learn more >](#)

Stanford Medicine in the News

Stanford scientists create artificial intelligence algorithm to diagnose skin cancer

Universal access to health care was on the minds of computer scientists at Stanford when they set out to create an artificially intelligent diagnosis algorithm for skin cancer. They created a database of nearly 130,000 skin disease images and trained the algorithm to visually diagnose potential cancer. From the very first test, it performed with inspiring accuracy. [Learn more >](#)

New wearable sensors predict when you are getting sick

New research from Stanford professor and chair of genetics, Michael Snyder, PhD, shows that fitness monitors and other wearable biosensors can tell when an individual's heart rate, skin temperature, and other measures are abnormal, suggesting possible illness before it occurs. The results of Dr. Snyder's current study raises the possibility of identifying inflammatory disease in individuals who may not even know they are getting sick. [Learn more >](#)

First cohort of Chan Zuckerberg Biohub investigators to include variety of Stanford faculty

The Chan Zuckerberg Biohub has announced that 19 Stanford faculty members will be among its first cohort of 47 investigators from Bay Area university collaborators. These investigators will work toward curing, preventing, and managing every disease. [Learn more >](#)

Giving Matters

A brother's gift: Riding to support research in triple negative breast cancer

When the unexpected diagnosis of triple negative breast cancer came for his sister Shelley, Rakesh Marwah, MD, knew that Stanford, with its world-class oncology faculty and one of the nation's leading experts in the disease, was where she should be treated. From the time of Shelley's diagnosis until she was finished with her treatment and in recovery, there was a feeling that the family wanted to do something to express thanks and inspire others.
